

Supplementary Figure S1 – msVIPER results and regulatory hierarchy per cohort

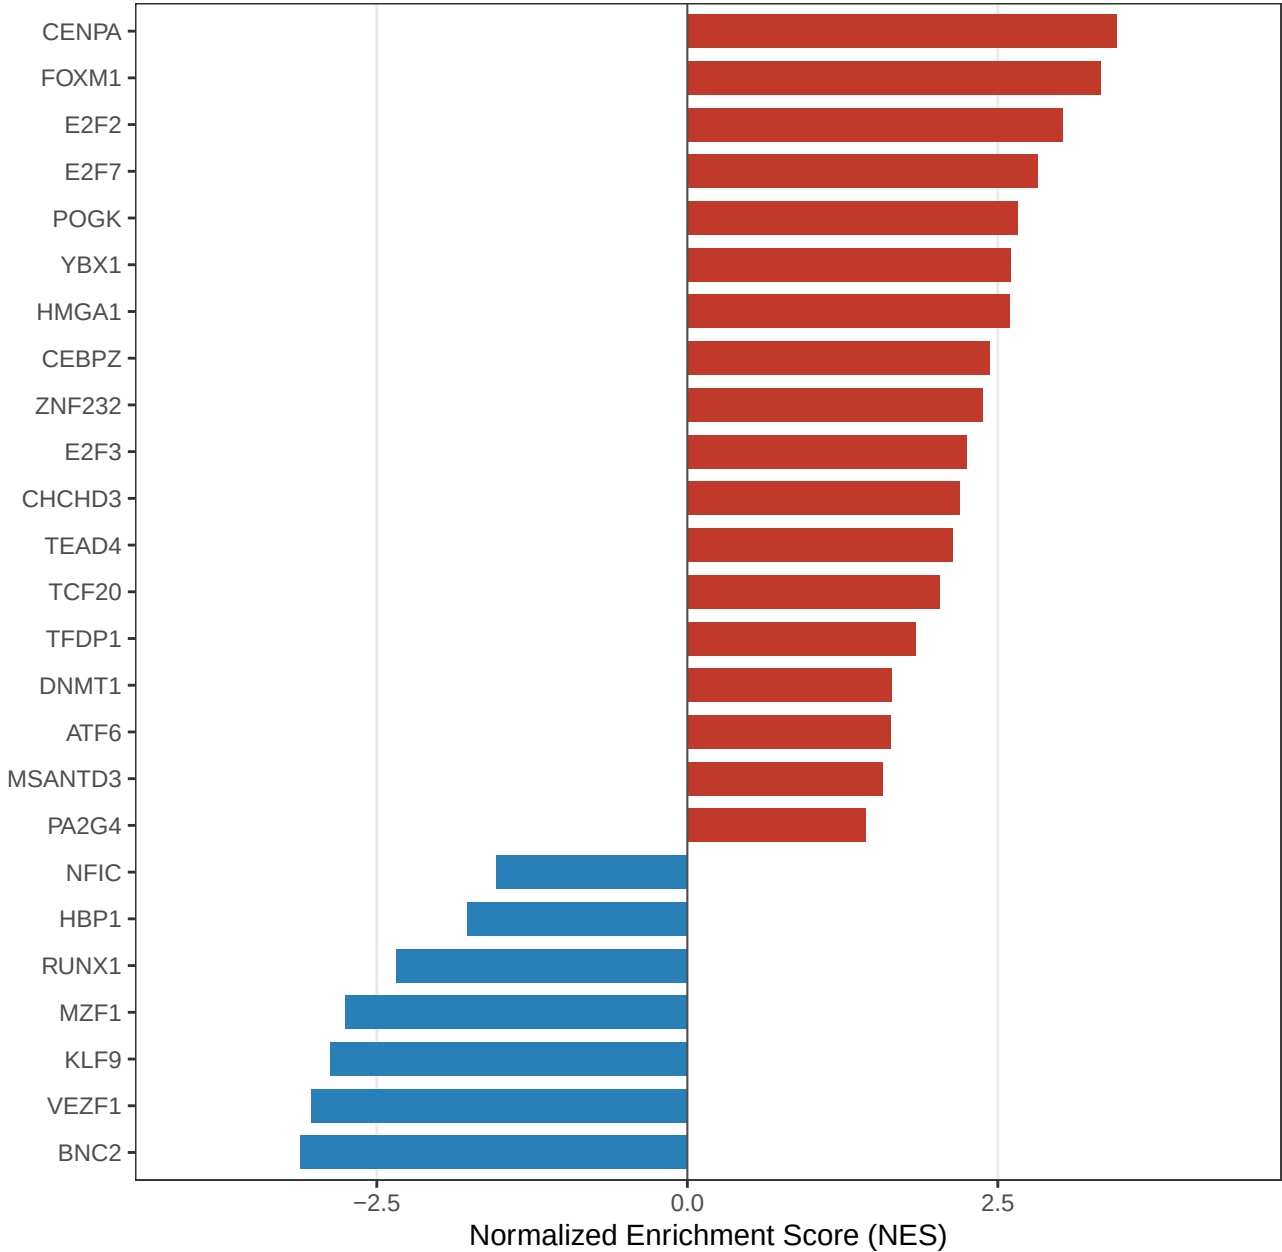

Panel A – TCGA Basal BRCA

msVIPER · Kbbh signature (1,322 genes) · n = 195 tumor vs 113 normal

Panel B – METABRIC Basal BRCA

msVIPER · Kbbh signature (1,213 genes) · n = 209 tumor vs 148 normal

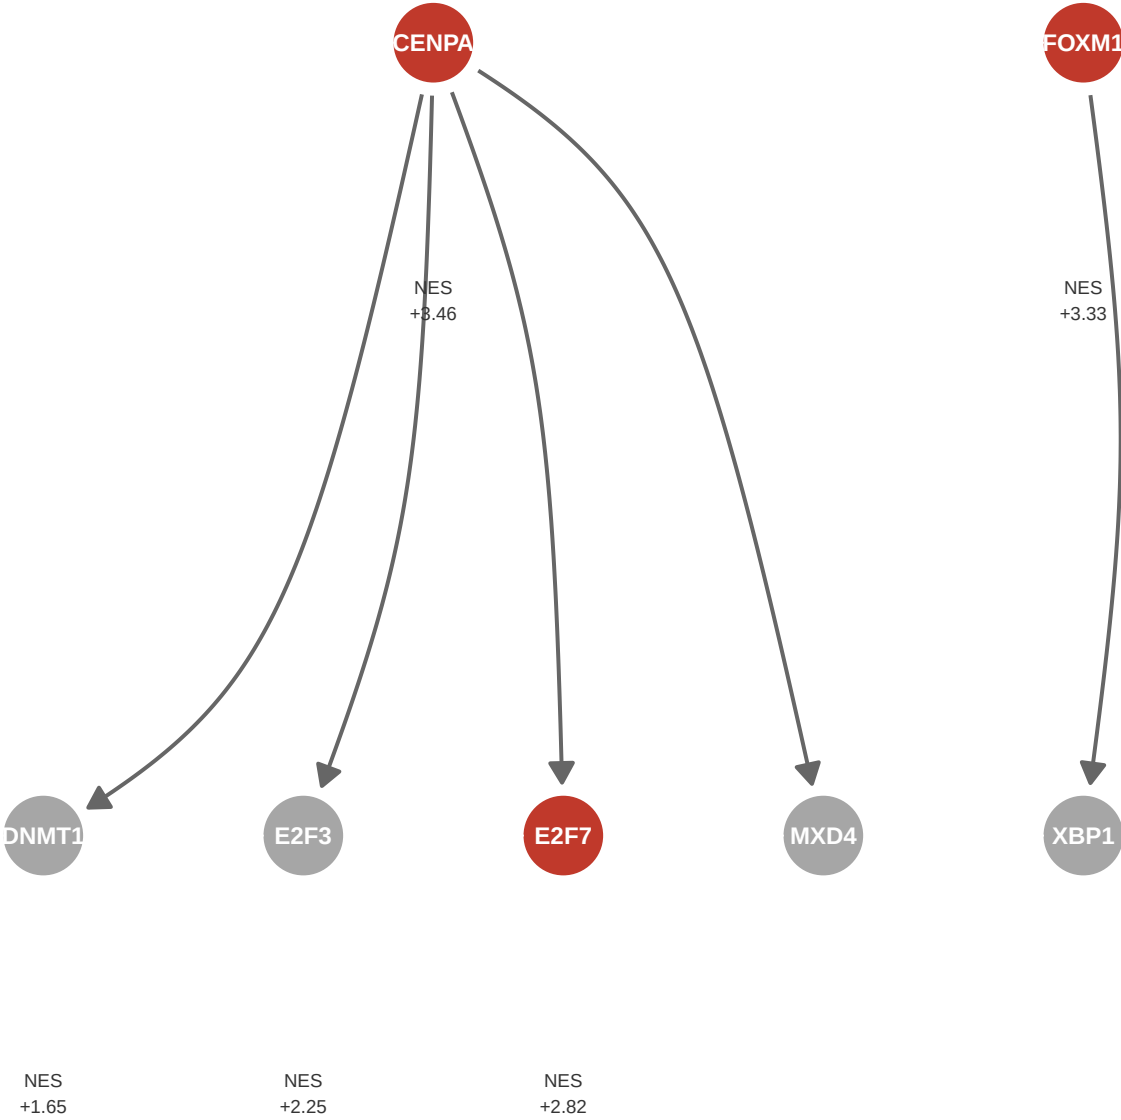

Panel C – TCGA Basal: Shadow pairs

Arrow: A -> B = A partially explains the inferred activity of B

Panel D – METABRIC Basal: Shadow pairs

Arrow: A -> B = A partially explains the inferred activity of B

Node type

● TMR (activated, meta-FDR < 0.05)

● Cohort-significant regulator

● Shadow target (explained node)
